Subj: Re: IP\_application

Andrzej,

The new class and network number for POLHEP is:

Class C, #192.86.14.0

NIC Handle: AS262

The NIC handle is an internal record searching tool. If a new Technical Point of Contact was registered with this application a new NIC handle has been assigned. If the Technical POC was already registered at the NIC but their handle was not provided in the application, it has been listed here for your reference and for use in all future correspondence with the NIC.

If you require the registration of any hosts or gateways on this network in the DoD Internet Host Table maintained by the NIC, send the names and network addresses of these hosts and gateways to HOSTMASTER@NIC.DDN.MIL.

PLEASE NOTE: The DoD Internet Host Table has grown quite large and is approaching the limits of manageability. The NIC strongly discourages the registration of new hosts in the table except in cases where interoperability with MILNET is essential. At most, the NIC is prepared to accept no more than 10 initial registrations from new networks. We encourage you to register any new hosts or gateways with the domain name servers that will handle the information your hosts.

It is suggested that host number zero in any network be reserved (not used), and the host address of all ones (255 in class C networks) in any network be used to indicate a broadcast datagram.

The association between addresses used in the particular network hardware and the Internet addresses may be established and maintained by any method you select. Use of the address resolution procedure described in RFC 826 is encouraged.

Thanks again for your cooperation!  
Sharon McGregor

Subject: the information you requested for UXPLGW

Please find below the information necessary to downline load VMS and DECNET on the "Polish" microVax.

Ethernet Hardware address: 08002B0965F7  
Decnet Area, Node: 23.10  
Decnet Name: UXPLGW

Initial password for SYSTEM Account ---> CRACOW  
Location: Building 513 (computer room, next to the Gandalf PACX)  
System Manager: Pawel Jalocho <jalochoa@vxdeep.decnct.cern.ch>

For Pawel ---> when VMS and DECNET are installed, please contact Ben Segal ben@pram in order to get the TCP/IP software. Ben said he had a spare copy of the WUN/TCP stuff (Wollongong) which you were welcome to use.

For David Lord ---> during the installation the microVax is on the CERN Ethernet BUT physically disconnected from the Cracow modem. When the installation is complete, we will move the machine on an isolated E/T segment, with a cisco in the middle, and we will connect the modem. the machine will then become part of the "polish" DECNET (i.e. area 50)

For Jean-michel ---> please take care of the physical connection to the dummy E/T and the filtering via the cisco. The IP host name is: PLGATE, I think, and the address is 128.141.200.xx ?? thanks for providing the missing information directly to Pawel Jalocho.

I hope this is enough to get started, many thanks to all.

Olivier

P.S. I am away the whole of next week.

Subj: your microVax is now running, however...

Alan Lovell just informed me that your microVax is now installed to the extent  
that you can do SET HOST to it from VXCERN

The password for account SYSTEM has been changed to VAXCRACOW

Good Luck!

Olivier
