

CMX256A-3200

The CMX512-3200 is a 256 MByte, single bank, ultra-performance DDR SDRAM DIMM screened specifically for gaming applications. This part has been selected by our Compatibility Lab for its outstanding performance in motherboards commonly used in gaming rigs. This memory has been verified to operate at 200 MHz (2.5-3-3, 2T command rate) and 166 MHz (2-2-2, 1T command rate). Side-by-side comparison indicates that this is one of the fastest DDR modules available in the world.

FEATURES

- 256 Megabytes of memory
- Implemented using 32M x 8 DDR SDRAMs with 6.0 nanosecond access time
- 100% tested at 200 MHz in high performance motherboards
- Integrated aluminum heat spreader for improved thermal performance
- Benchmarked over multiple chip sets, processors, and motherboards
- Legendary Corsair reliability and service
- Lifetime warranty

TEST SPECS

- Each module is tested in either Epox EP-8K3A and/or Asus P4S333 at 200 MHz
- Latency: 2.5-3-3-T2 (one module installed)
185 MHz, 2.5-3-3-T2 (two modules installed)
- SPD programmed at proposed JEDEC values for PC2700 (PC3200 not defined by JEDEC)

The Fine Print: Newer motherboards may be used for production test as they become available. Corsair may periodically update the part with newer RAM revisions of same or greater performance. RAM used on the module may change without notice. © April, 2002, Corsair Memory, Inc.
